

The key to any supportive software are its integrations with surrounding technologies - that's why Nura Space has selected the widely-used Microsoft suite and the world's first smart locker solution Vecos.

Microsoft Teams integration allows enterprise level management of Nura Space, the timely management of access and a consistent user experience.

Active Directory integration through Azure is key to keeping users up-to-date in our Nura Space database, with the inclusion of two-factor-authenticated login.

Office 365 allows Nura Space to push calendar invites, read availabilities and effectively manage meeting rooms in one convenient place.

Our longstanding partner Vecos created the world's first smart-locker booking system, which we have integrated into our technology to allow users to remotely book, release or open a locker from their phone.

Our desk booking feature is compatible with the CMS Engage, a smart IoT hardware comprising a Smart Cell, Desk Sensor and Status Indicator with RFID. Workstations power up upon check-in for reduced energy consumption.

Our room booking feature is compatible with the sophisticated XY Sense occupancy sensor. It feeds real-time vacancy and occupancy data into the app to auto-cancel unused bookings and capture utilisation data for reporting.
